

Equipment Preparation for Operation

Based on the results of our inspection, we reactivate your equipment at a minimum time and cost. This is the last important step to qualify your equipment for an extension of its Certificate of Compliance (CoC).

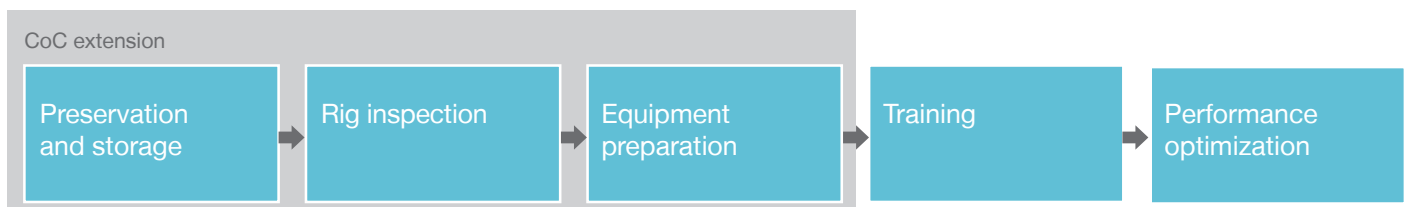

Equipment prepared by MHWirth as an Original Equipment Manufacturer (OEM) may qualify for an extension of its CoC, in combination with preservation, storage and inspection.

With in-depth knowledge of the condition of the equipment and in cooperation with our customers, we identify the exact scope of work and provide you with qualified personnel to execute all relevant work. This service includes overhaul, repair, maintenance, installation, testing and commissioning according to our OEM procedures, class or contractor specific requirements. Our services meet the DNV GL class guideline CG-0290.

Our inspection service includes a control system check, including functional test, integration test, network and IT health.

Additionally, our experienced specialists can execute re-certifications, installation, functional testing, as well as commissioning, just to name a few. Spare parts, product bulletins and rig specific upgrades can also be provided. Work can be executed in our workshop, or on site, according to your project requirements.

The combination of MHWirth's OEM equipment and our experienced personnel will ensure optimum efficiency for you rig.

Benefits

- Equipment preparation carried out by OEM personnel and according to our guidelines contributes towards qualifying your equipment for an extension of its Certificate Of Compliance (CoC) after successful integration test
- Updated/aligned OEM documentation according to class requirements
- Optimal and reliable performance – immediately after reactivation
- Reduced maintenance cost and risk of equipment downtime
